1. This action is in response to the application that was filed on January 7, 2002.

Claims 1-8 are pending.

2. The following is an examiner's statement of reasons for allowance:

The cited prior art describes synchronous dynamic access memory (SDRAM) devices that include circuitry for performing self-refresh operations during power-down modes of operation. The cited prior art does not describe the claimed procedure for placing the SDRAM devices into the self-refresh mode.

The claimed invention is allowable over the art of record because the art of record does not teach or suggest a memory control system for placing a volatile semiconductor memory device into a self refresh mode comprising a processor that fetches a program through a system bus, stops its own operation and outputs an internal power-down signal upon fetching a sleep command and a power-down control circuit that outputs a control signal upon receiving the internal power-down signal output by the processor, the control signal puts a volatile semiconductor memory device connected to the system bus into a self refresh mode as claimed in independent claim 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
